Introduction

HP is working hard to enable new materials innovations that break down some of the traditional barriers to 3D printing adoption—cost, quality performance, and diversity.

Therefore, a selected range of polyamide-based materials has been engineered for HP Multi Jet Fusion technology, thus offering engineering-grade thermoplastics that provide optimal output quality and high reusability at a low cost per part.1

HP 3D Printing polyamide-based materials for the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solution

HP 3D Printing polyamide-based materials for the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solution include HP 3D High Reusability1 PA 12 (HP 3D HR PA 12), HP 3D High Reusability2 PA 12 Glass Beads (HP 3D HR PA 12 GB), and HP 3D High Reusability2 PA 11 (HP 3D HR PA 11).

HP 3D HR PA 12: Ideal for producing strong, functional, detailed complex parts

- Robust thermoplastic that produces high-density parts with balanced property profiles and strong structures.
- Provides excellent chemical resistance to oils, greases, aliphatic hydrocarbons, and alkalies.4
- Meets biocompatibility certifications such as USP Class I-VI and US FDA guidance for Intact Skin Surface Devices.5
- Provides the best balance between performance and cost compared with other HP 3D Printing polyamide-based materials.
- Engineered to produce final parts and functional prototypes with fine detail and dimensional accuracy, and designed for the production of functional parts across a variety of industries.
- Ideal for complex assemblies, housings, enclosures, and watertight applications, achieving watertight properties without any additional post-processing.
- Compatible with the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solutions.

HP 3D HR PA 12 Glass Beads: Ideal for producing stiff, functional parts

- 40% glass bead-filled thermoplastic material with both optimal mechanical properties and high reusability.6
- Provides dimensional stability as well as repeatability.7
- Engineered to produce common glass bead applications with detail and dimensional accuracy, and designed for production of functional parts across a variety of industries.
- Ideal for applications requiring high stiffness like enclosures, housings, fixtures, and tooling.
- Compatible with the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solution.
HP 3D HR PA 11: Ideal for producing strong, ductile,8 functional parts

- Thermoplastic material with renewable raw material from vegetable castor oil (reduced environmental impact).8 It delivers optimal mechanical properties, providing an excellent chemical resistance6 and enhanced elongation-at-break.7
- Easy-to-process material that enables high productivity and less waste.8
- Engineered to reliably produce final parts and functional prototypes with fine detail and dimensional accuracy, and designed for the production of functional and final parts across a variety of industries.
- Provides impact resistance and ductility7 for prostheses, insoles, sporting goods, snap-fits, living hinges, and more.
- Compatible with the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solution.

The mechanical properties of HP 3D HR PA 12, HP 3D HR PA 12 GB, and HP 3D HR PA 11 in the HP Jet Fusion 4200 3D Printing Solution and the HP Jet Fusion 5200 Series 3D Printing Solution have been characterized in the HP 3D Printing materials for the HP Jet Fusion 4200 3D Printing Solution – Mechanical Properties and HP 3D Printing materials for the HP Jet Fusion 5200 Series 3D Printing Solution – Mechanical Properties white papers, respectively.

1. HP Jet Fusion 3D Printing Solutions using HP 3D High Reusability PA 12 provide up to 80% powder reusability ratio, producing functional parts batch after batch. For testing, material is aged in real printing conditions and powder1 is tracked by generations (waste case for reusability). Parts are then made from each generation and tested for mechanical properties and accuracy.
2. HP Jet Fusion 3D Printing Solutions using HP 3D High Reusability PA 12 Glass Beads provide up to 70% powder reusability ratio, producing functional parts batch after batch. For testing, material is aged in real printing conditions and powder is tracked by generations (waste case for reusability). Parts are then made from each generation and tested for mechanical properties and accuracy.
3. HP Jet Fusion 3D Printing Solutions using HP 3D High Reusability PA 11 provide up to 70% powder reusability ratio, producing functional parts batch after batch. For testing, material is aged in real printing conditions and powder is tracked by generations (waste case for reusability). Parts are then made from each generation and tested for mechanical properties and accuracy.
4. Based on internal testing and public data for solutions on market as of April, 2016. Cost analysis based on: standard solution configuration price, supplies price, and maintenance costs recommended by manufacturer. Cost criteria: printing 1.4 full build chambers of parts per day/5 days per week over 1 year of 30 cm3 parts at 10% packing density on fast print mode using HP 3D High Reusability PA 12 material, and the powder reusability ratio recommended by manufacturer, and printing under certain build conditions and part geometries.
5. Tested with diluted alkalies, concentrated alkalies, chlorine salts, alcohol, esters, ethers, ketones, aliphatic hydrocarbons, and alkalies.4
6. Based on HP internal testing, June 2017. HP 3D600/3D700/3D710 Fusing and Detailing Agents and HP 3D High Reusability PA 11 powders meet USP Class I and US FDA’s guidance for intact Skin Surface Devices. Tested according to USP Class I-IV including irritation, acute systemic toxicity, and implantation; cytotoxicity per ISO 10993-5, Biological evaluation of medical devices-part 5: Tests for in vitro cytotoxicity; and sensitization per ISO 10993-10, Biological evaluation of medical devices-Part 10: Tests for irritation and skin sensitization. It is the responsibility of the customer to determine that its use of the fusing and detailing agents and powder is safe and technically suitable to the intended applications and consistent with the relevant regulatory requirements (including FDA requirements) applicable to the customer’s final product. For more information, see hp.com/go/3Dmaterials.
7. Based on using recommended packing densities, offers high reusability of surplus powder. Limit refers to the maximum capacity stored, not the actual materials volume. Materials are measured in kilograms.
8. Testing according to ASTM D638, ASTM D256, and ASTM D648 using HDT at different loads with a 3D scanner. Testing monitored using statistical process controls.
9. HP 3D High Reusability PA 11 provides up to 80% powder reusability ratio, producing functional parts batch after batch. For testing, material is aged in real printing conditions and powder is tracked by generations (waste case for reusability). Parts are then made from each generation and tested for mechanical properties and accuracy.
10. Easier to process than standard HP 3D High Reusability PA 12, providing proper fusing along with good spreadability and compatibility due to its small particle size.
11. Full color parts applicable only with the HP Jet Fusion 580 Color 3D Printer.
