Logistics Control Tower & Multidimensional Profitability

Phil Clark
Director of Data Sciences
philip.clark@yodel.co.uk

Agenda

Yodel 1

Yodel Data Timeline 2

Logistics Control Tower 3

Multidimensional Profitability 4

Q & A 5

Yodel Background & Data Journey

Yodel Parcel Journey

Client Collection

1,500 trailers

3 UK Sort Hubs: Hatfield, Wednesbury, Shaw

55 UK Service Centres + Republic of Ireland

5,000 Final Mile Delivery vehicles
5,500 delivery routes per day

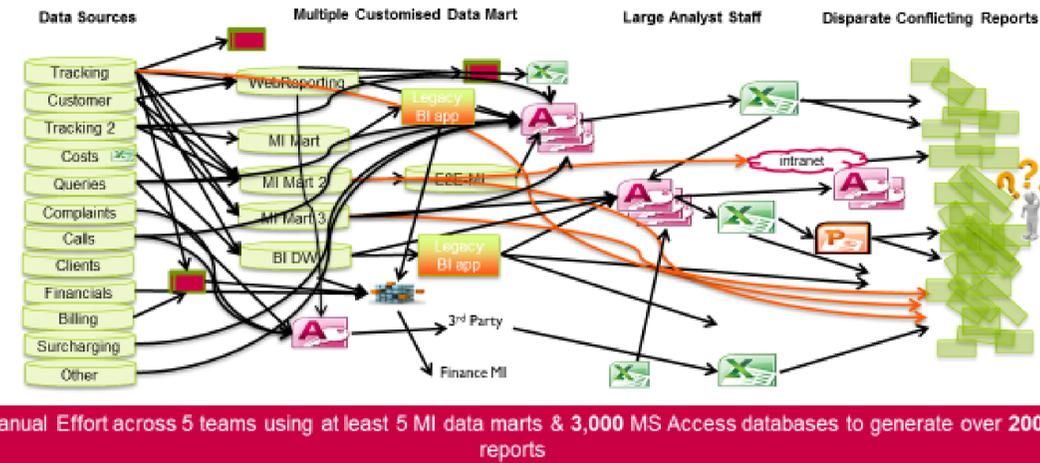

145M parcel deliveries per year
6,000 collect+ Stores
1M deliveries on peak days

Data Timeline

LEGACY DATA ARCHITECTURE

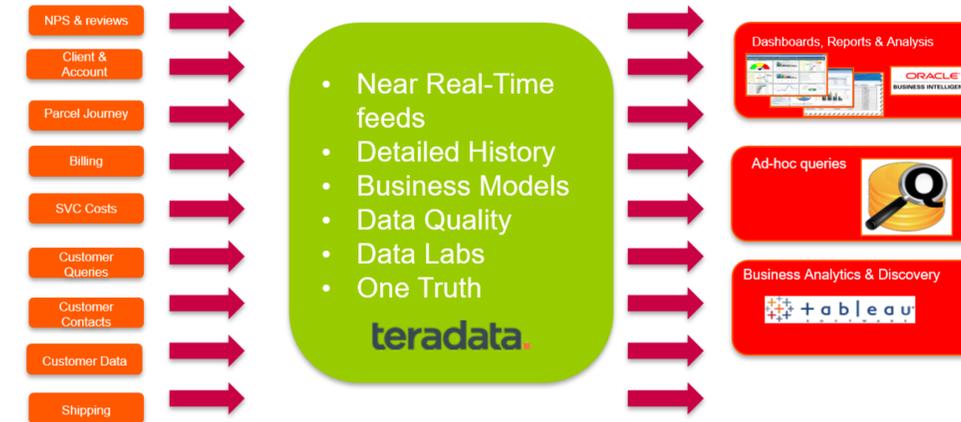

2015 – Complex, manual information provision. No single agreed source of business measures.

YODEL NEW ANALYTICS ARCHITECTURE

One Yodel Data Warehouse with standard & self-service reporting and ad-hoc analysis capability. Single Version of Truth

2015

- Build the Platform
- Compliance Reporting 8 weeks from platform arrival

- Building Data team (5 to 10 FTE) and agile process

2016

- 200 Excel Reports Decommissioned.

- Automated Dashboards
- New compliance reports

2017

- Driver Portals
- Computing Big Data and IOT Excellence Award 2017 for the

“Outstanding Data Management Solution”

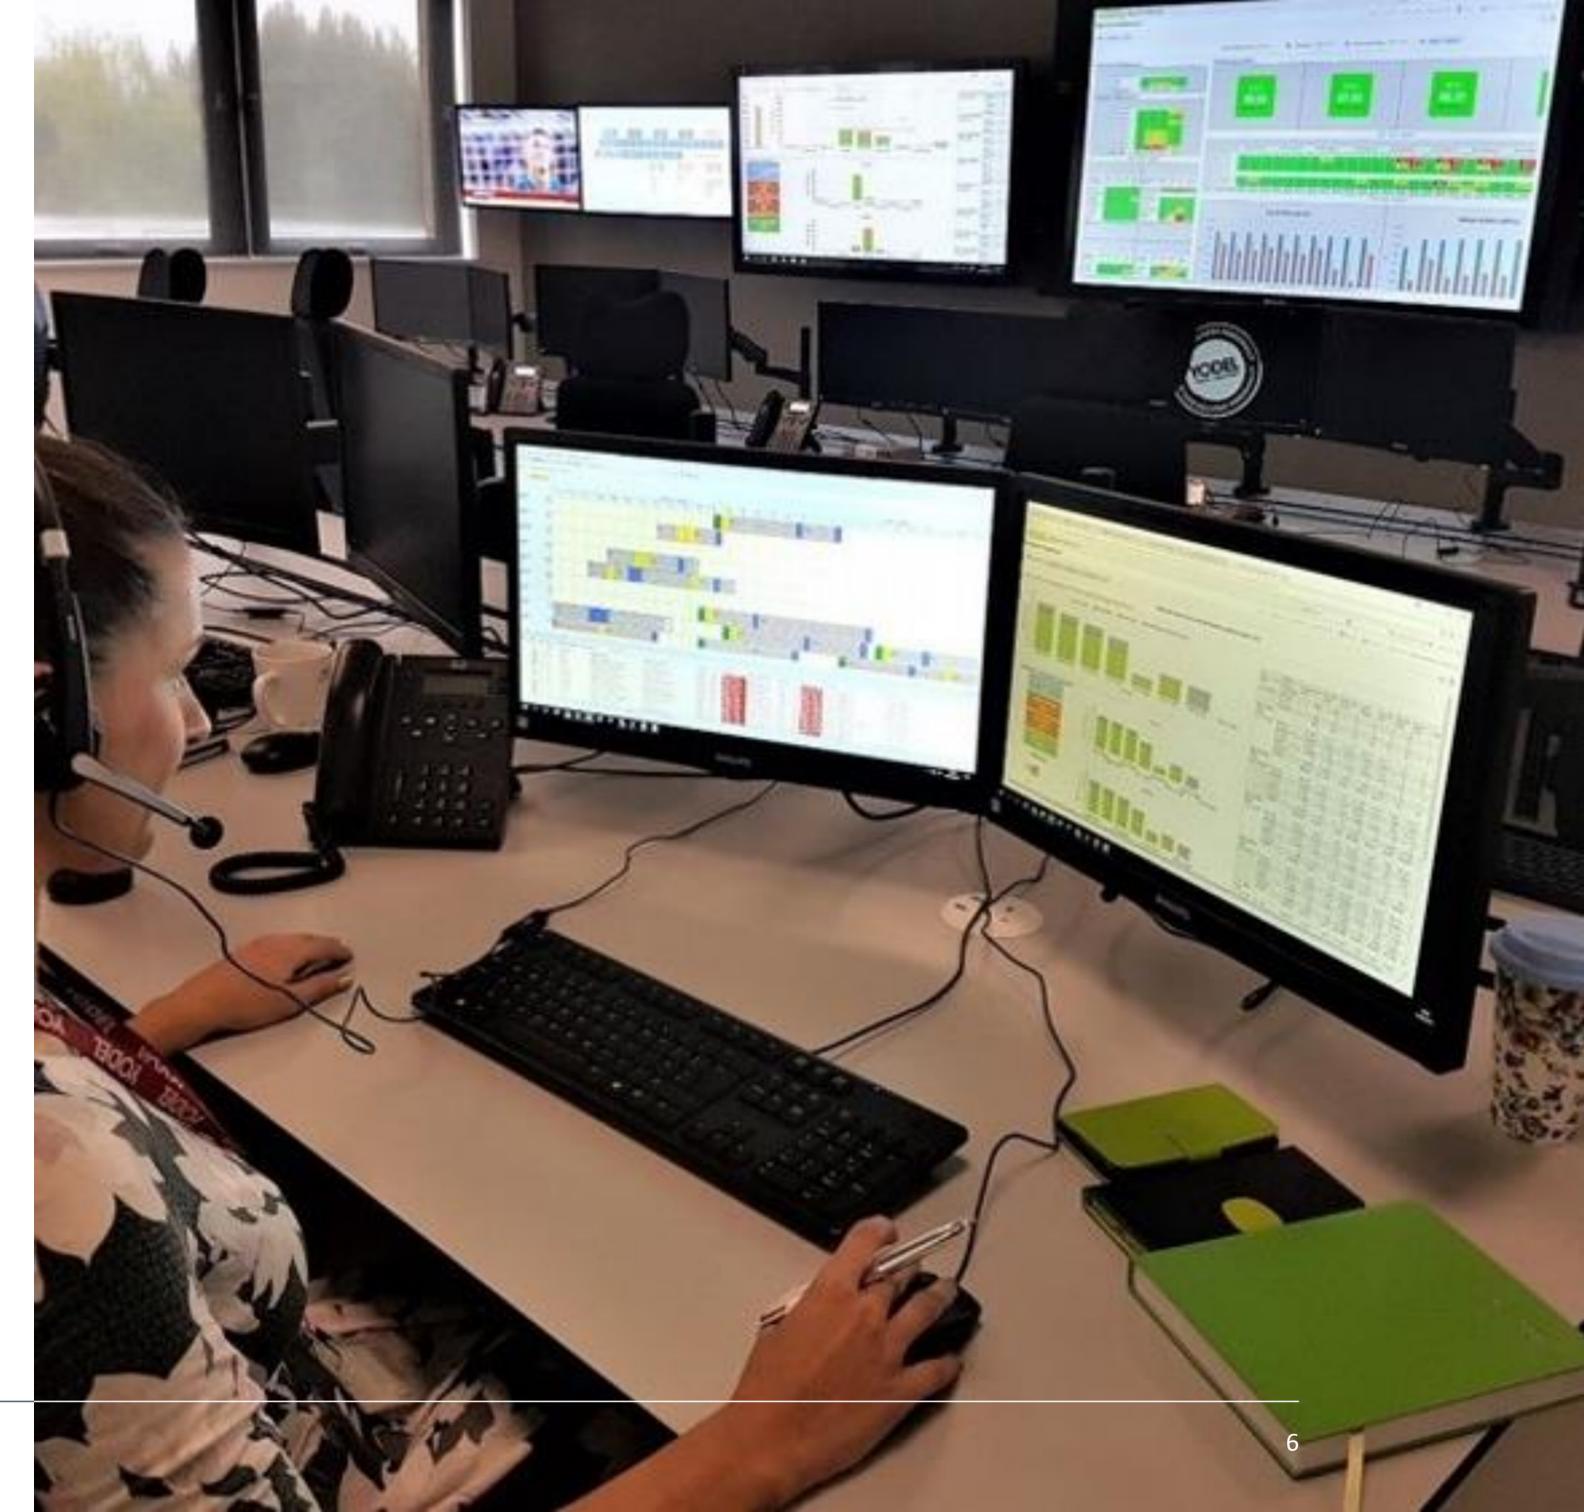

- Data Governance Board
- Derived/Estimated Data

2018

- Logistics Control Tower

One Source of Accurate Data

- Over 500 internal users and 150 external clients accessing near real-time dashboards
- Service Centres monitor driver compliance
- Sort Operations monitor numbers and patterns for miss-routes
- Central Planning team monitor volumes vs. plan to help network re-modelling
- Sort and Driver productivity by activity type
- Strategic Exec Dashboards
- 24/7 near real-time visibility of entire operation
- Widespread Yodel access to accurate, timely data in a single Yodel data store
- Improve tracking and alerting
- React Quickly to changes or issues

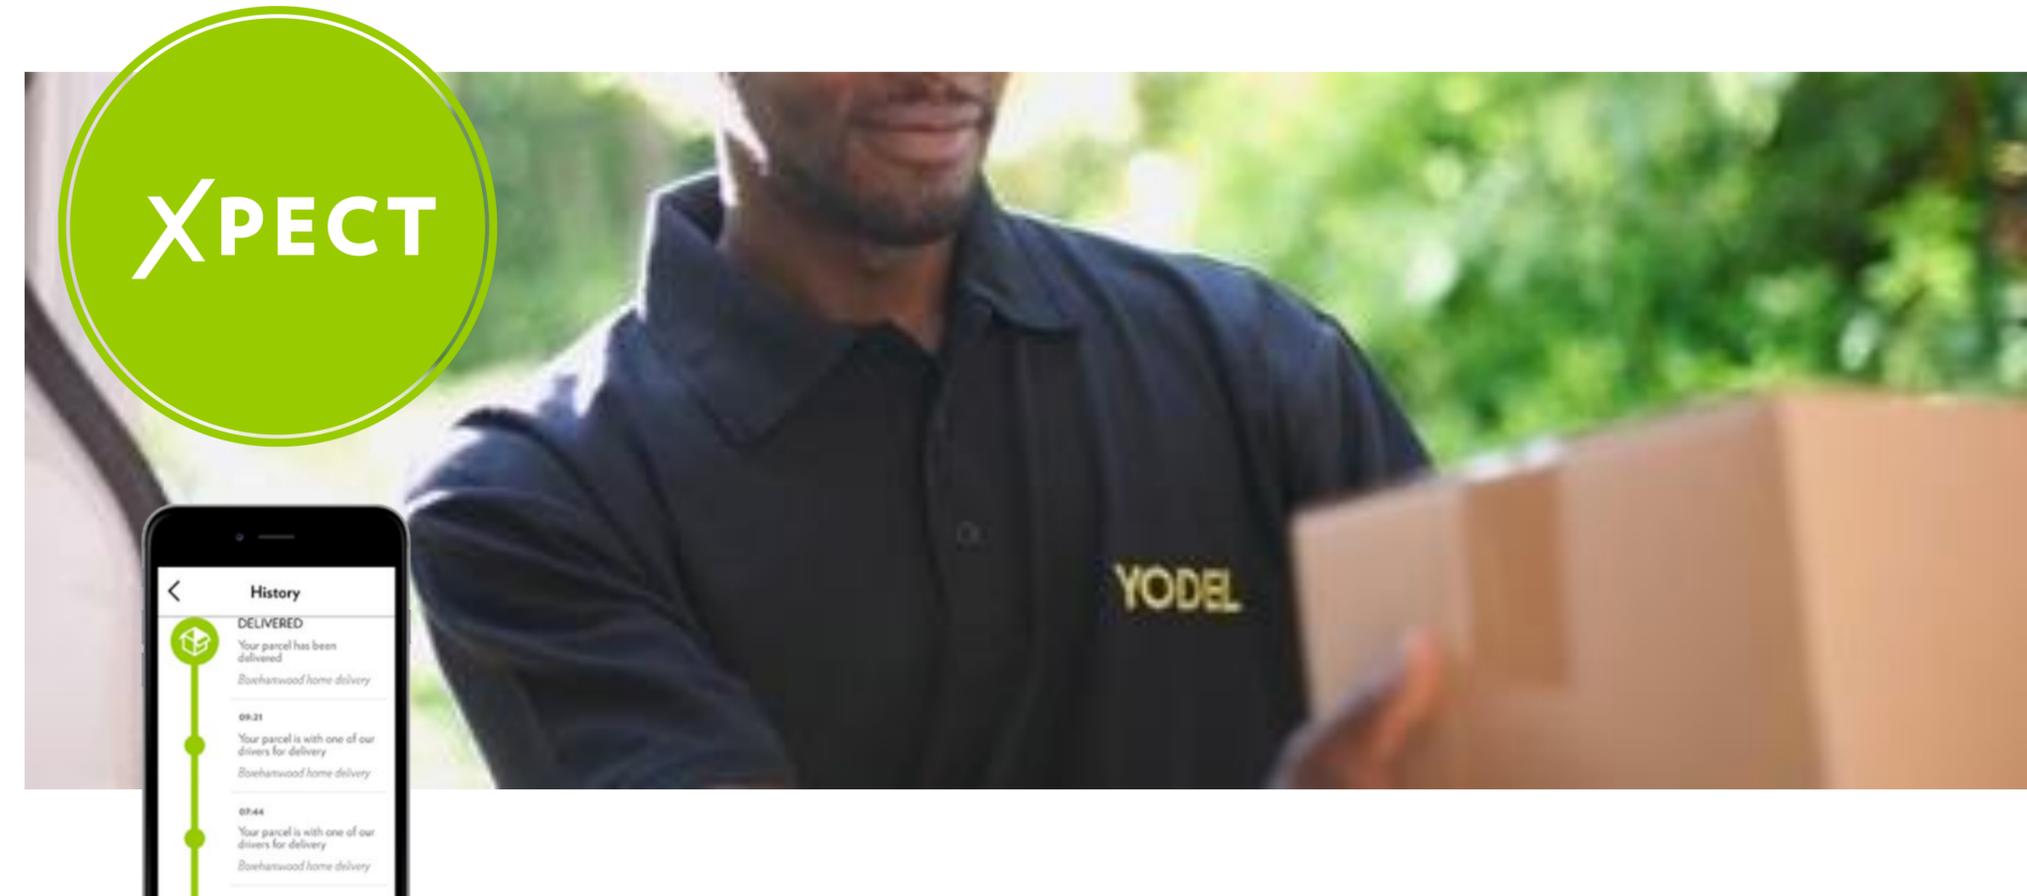

What if we could predict & prevent failure

Yodel Xpect Service.

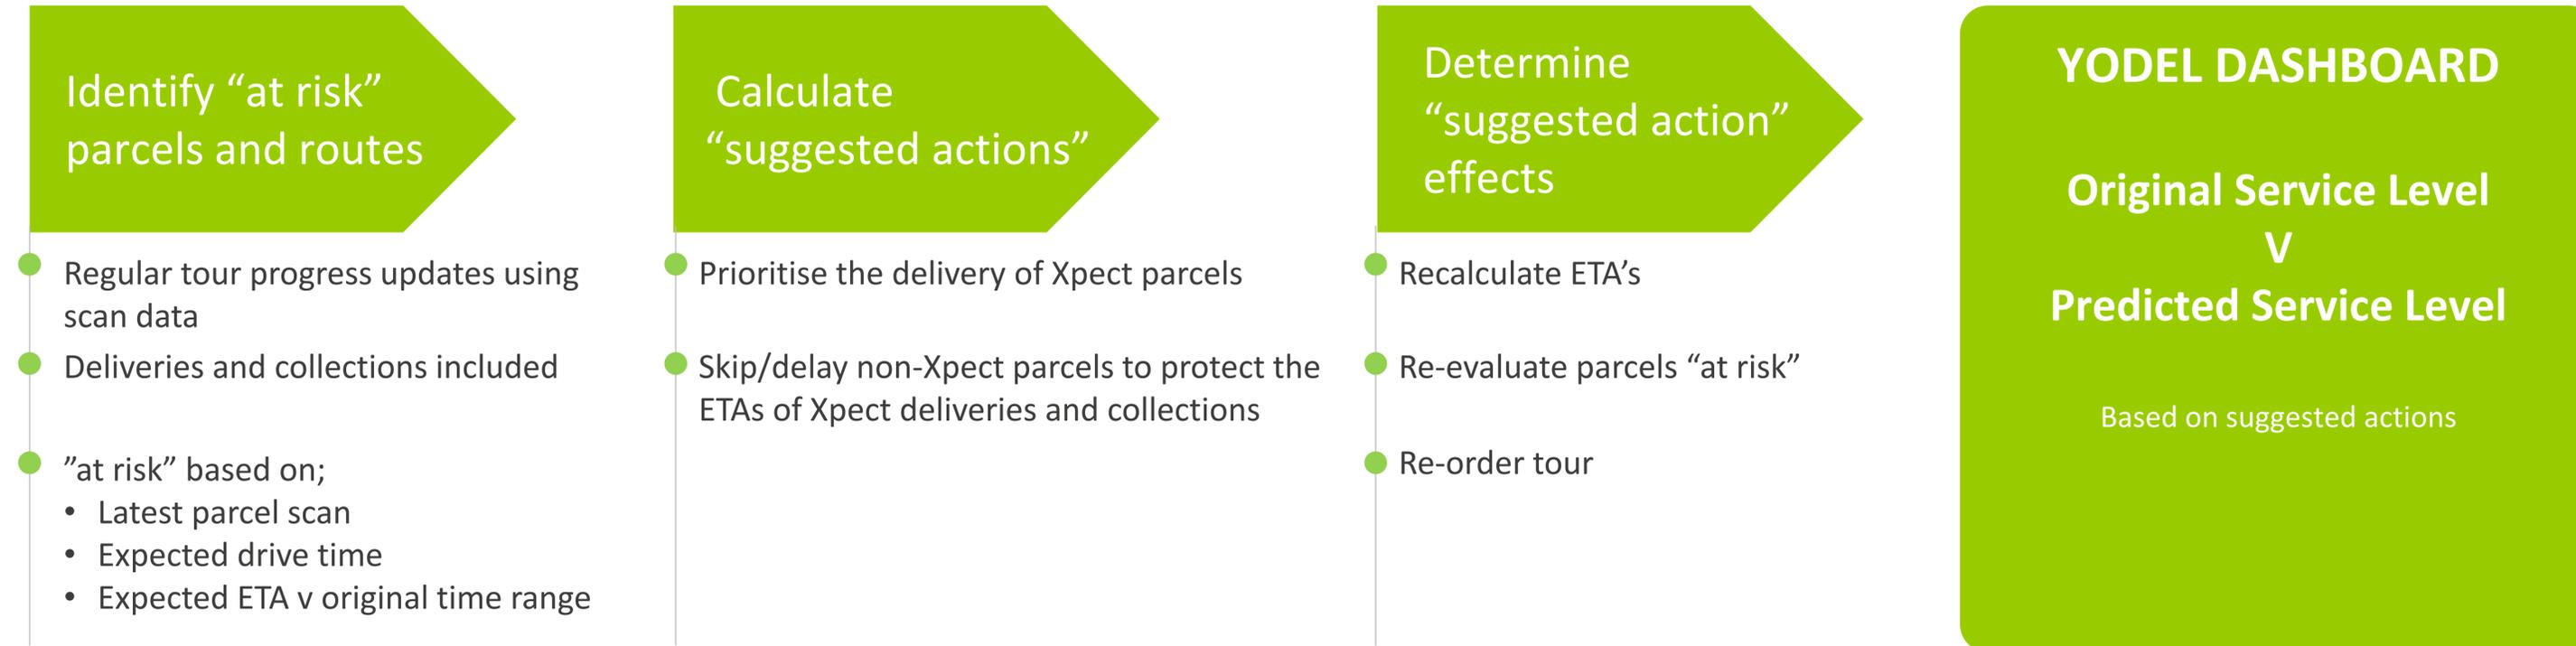

Yodel Xpect is Yodel's van-based delivery service with a two-hour delivery window notification keeping customers informed through push notification, email and SMS.

Can we build algorithms that will predict failure and recommend corrective actions

Process Outline

Continuous near real-time analysis of up to 5,500 driver tours delivering over 500,000 parcels. Predict end of day performance & recommend actions to improve

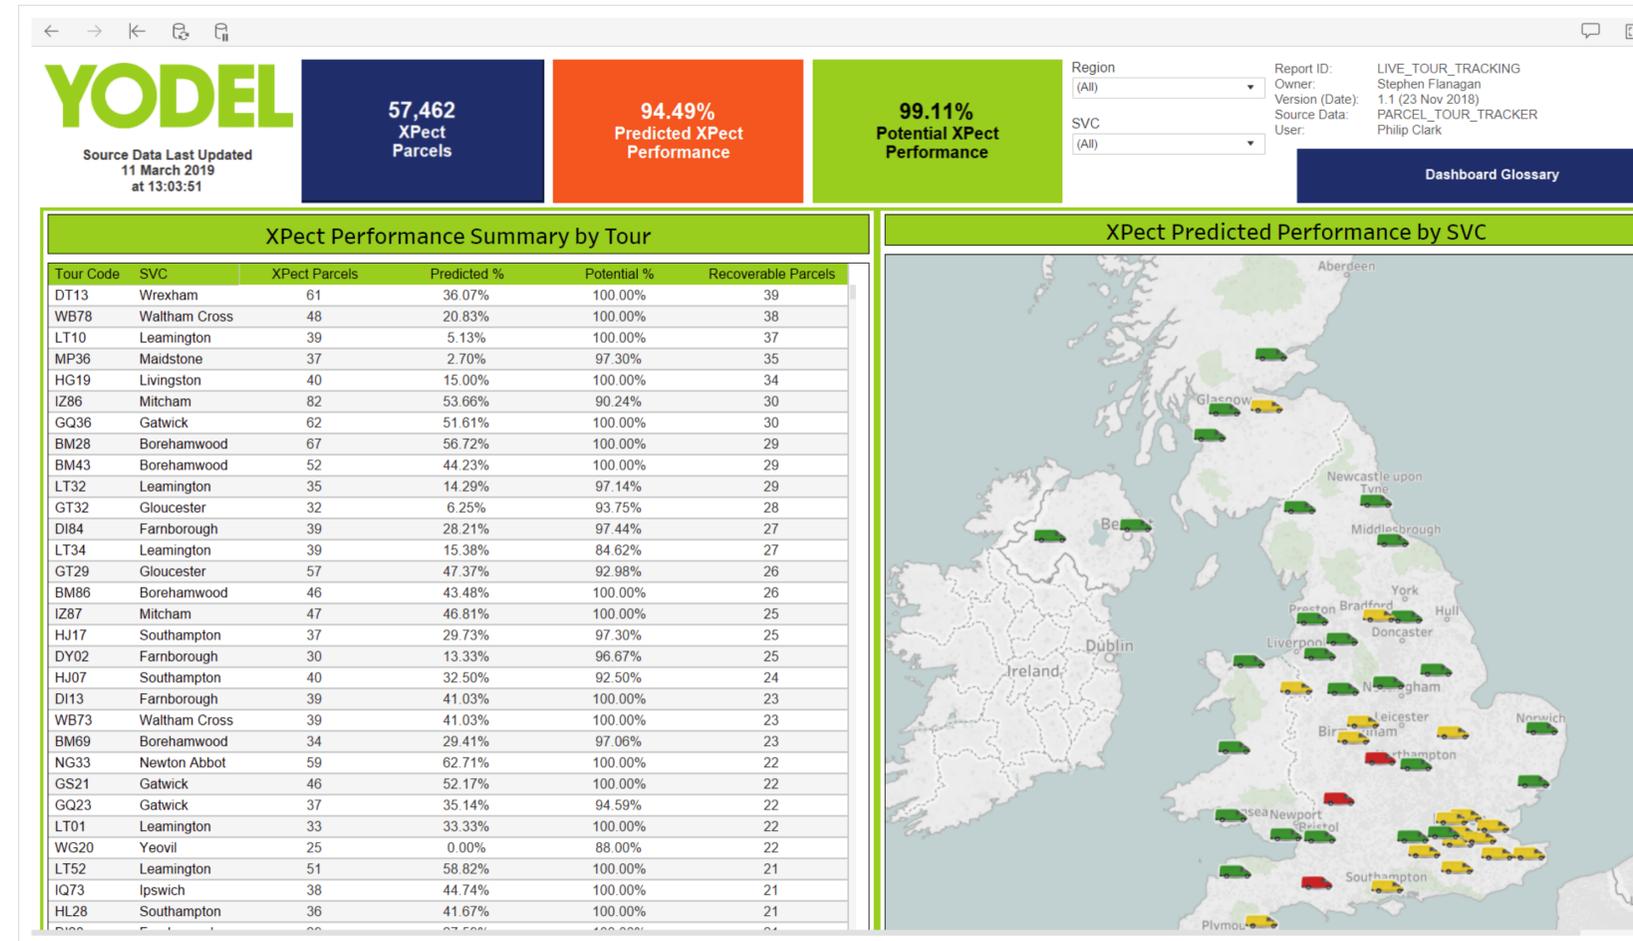

Results

What are the improvements to the Xpect Service?

Data Snapshot		Completed Xpect Performance		Projected Xpect Performance		Actioned Xpect Performance	
Date	Time	Successful / Total	Current % Successful	Successful / Total	Total % Successful	Successful / Total	Total % Successful
15/08/2018	15:12	15978 / 16381	97.5%	11719 / 12925	94.5%	12742 / 12925	98.0%
15/08/2018	17:37	23800 / 24723	96.3%	4418 / 5264	94.1%	5021 / 5264	96.1%
15/08/2018	End	29623 / 31300	94.6%	-	-	-	-
24/08/2018	12:50	9218 / 9318	98.9%	16321 / 17463	95.4%	17193 / 17463	98.6%
24/08/2018	14:51	17074 / 17519	97.5%	10917 / 12022	94.8%	11650 / 12022	97.2%
24/08/2018	17:30	24760 / 25755	96.1%	3946 / 4774	94.0%	4332 / 4774	95.3%
24/08/2018	End	29642 / 31663	93.6%	-	-	-	-

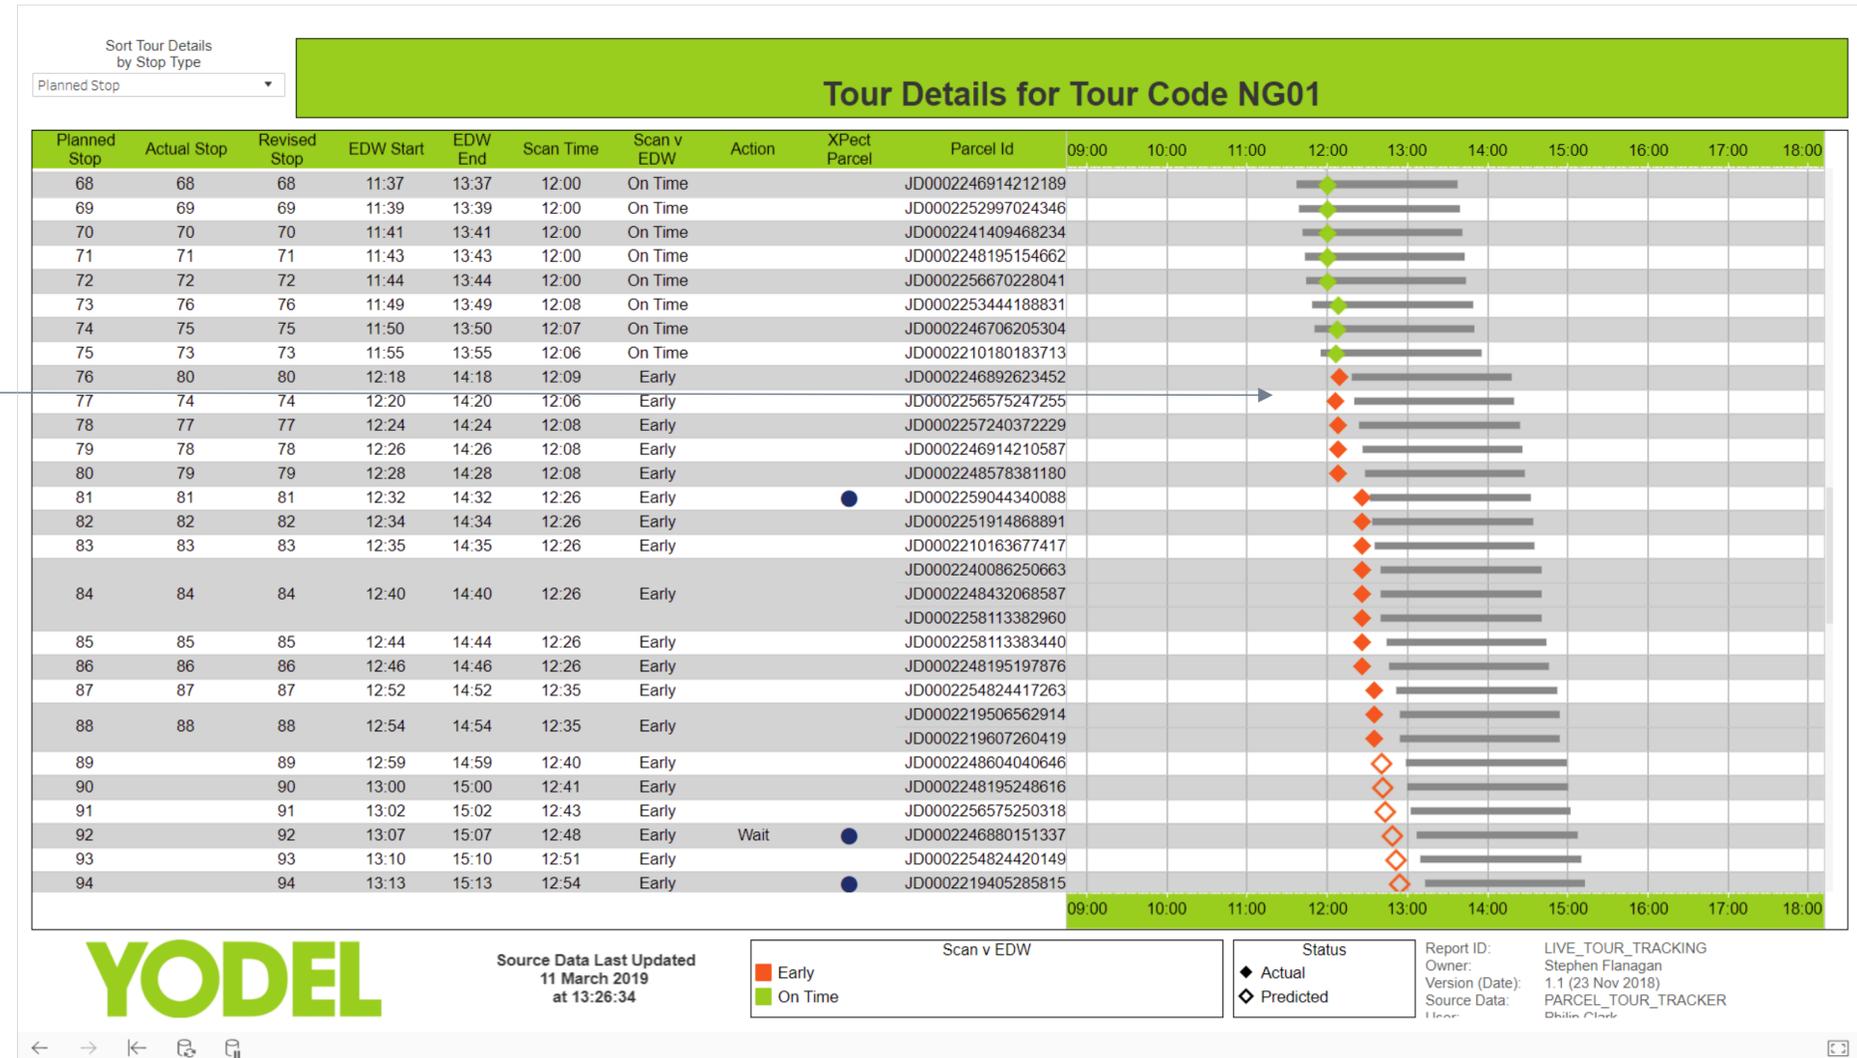

- Xpect performance decreases across the day without intervention
- Projected performance similar to where the day ended
- Action provided increased Xpect Performance throughout the day

Live Predictions

Live Predictions

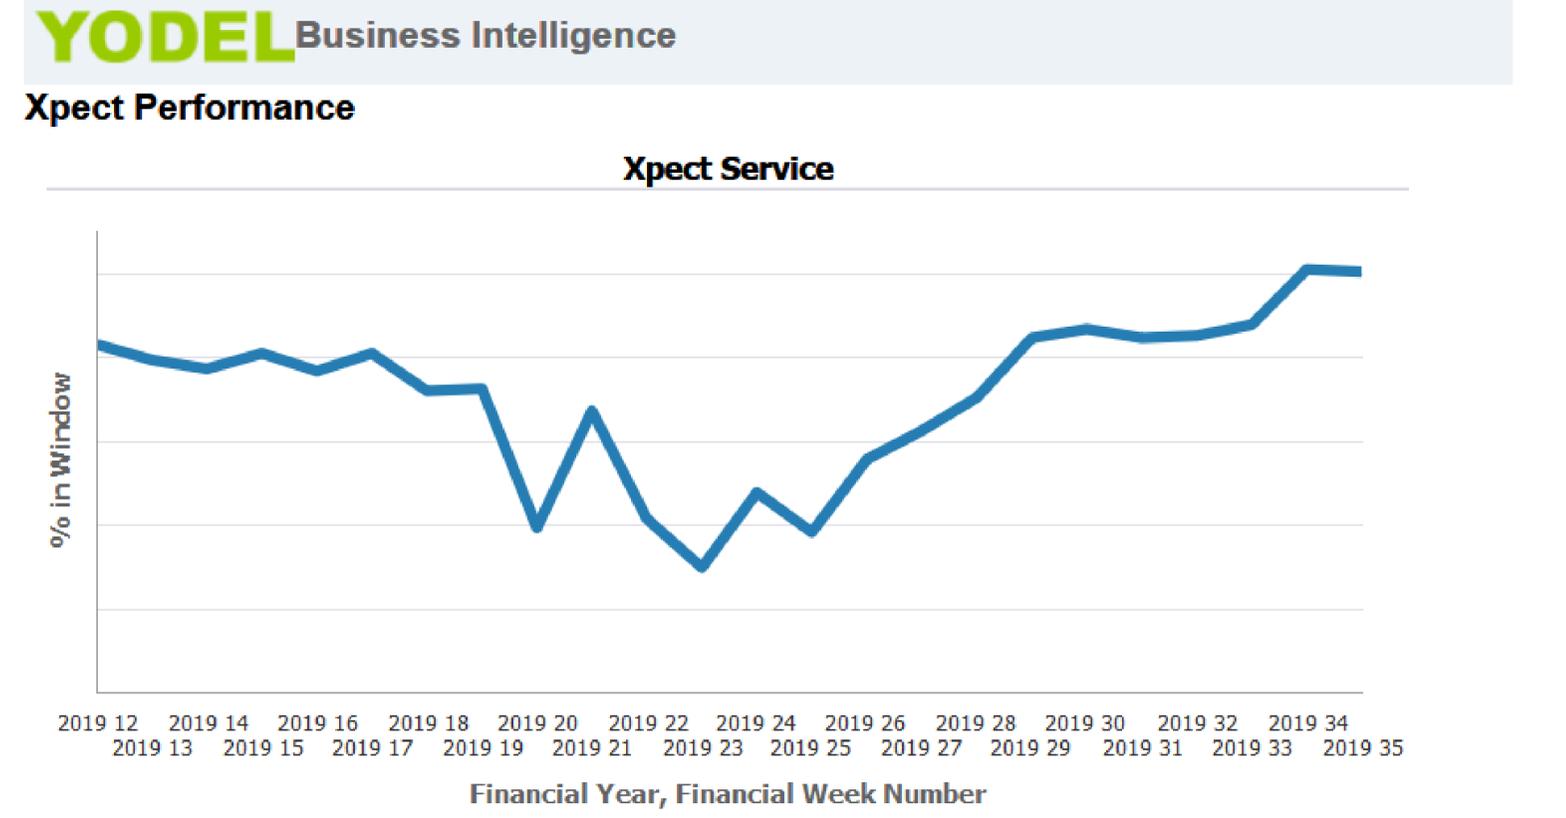

● Driver predicted to be early – advice wait

Impact

- Implementation in January 2019
- Reversed recent service decline almost immediately
- Uplift of 4.5% in service since implementation

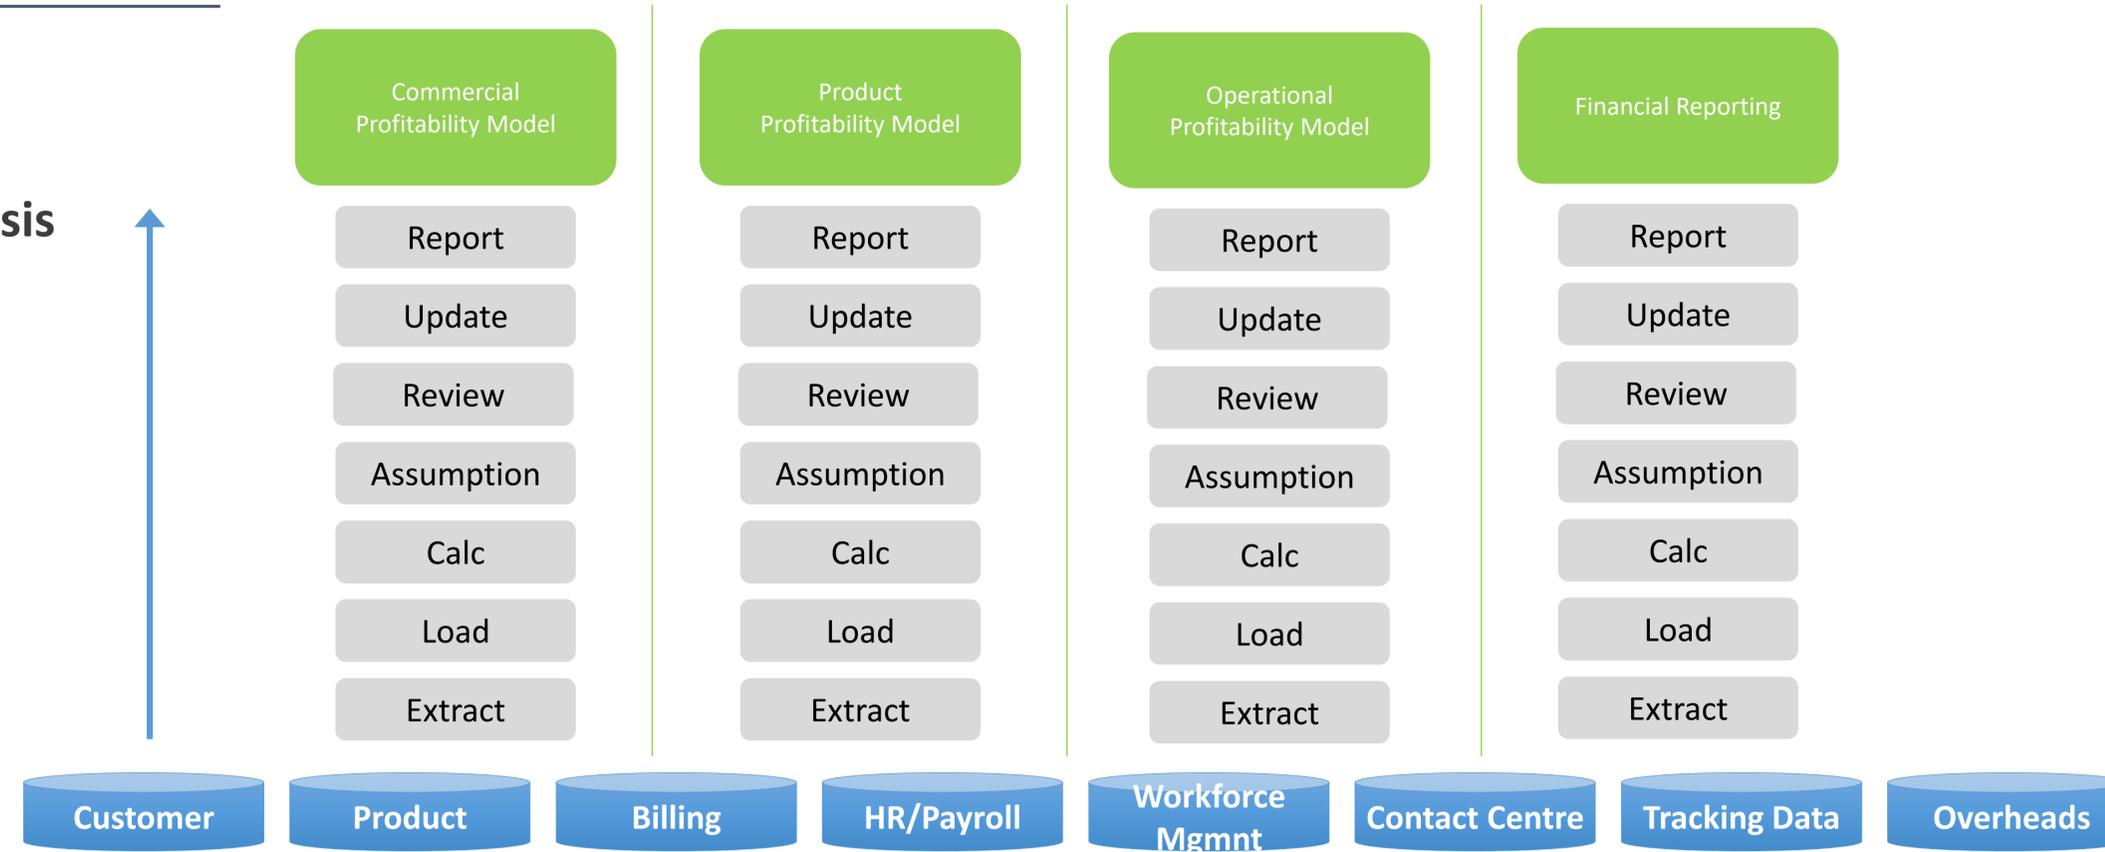

Multidimensional Profitability

Multiple Excel Models base on averages and assumptions

- Summarised Data: No detail for diagnosis
- Too many assumptions
- No Reconciliation to GL
- No audit
- Time Consuming
- Not Trusted

Using Averages

e.g. If Leeds Service Centre receives 88000 parcels a week:

Location Name	Calendar Date	Parcel Volume	Activity Cost	Cost Per Parcel
Leeds	Sunday	601	85	0.14
	Monday	14533	13,508	0.93
	Tuesday	14708	16,231	1.10
	Wednesday	16177	16,989	1.05
	Thursday	15705	16,855	1.07
	Friday	15379	16,116	1.05
	Saturday	11219	12,233	1.09
TOTAL		88322	92018	1.04

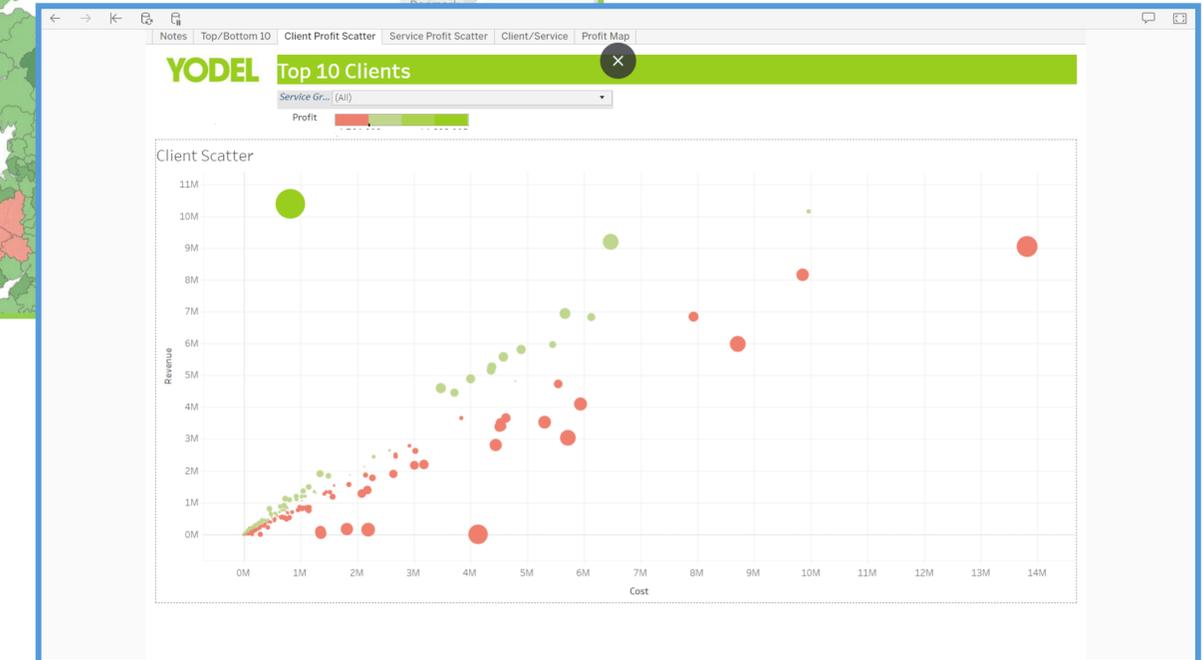

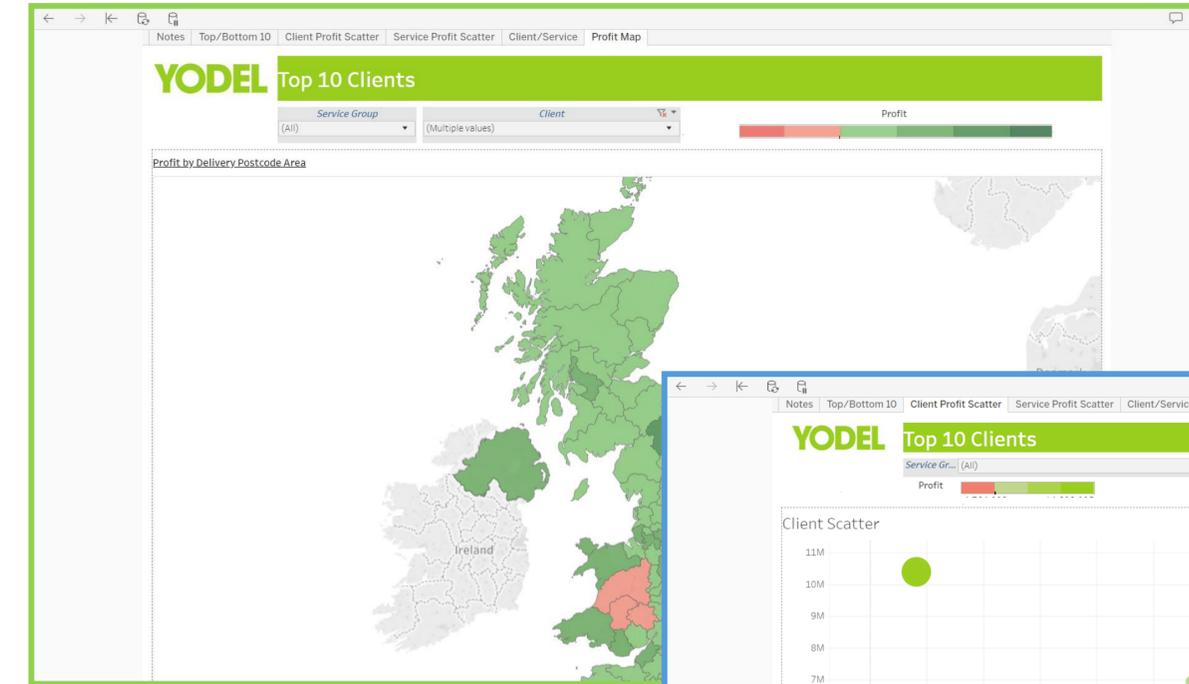

- What about parcels not delivered on 1st attempt?
- Stop Density?
- Rural vs Urban?
- Are all customer parcels the same?
- Parcels with manual handling or address queries?

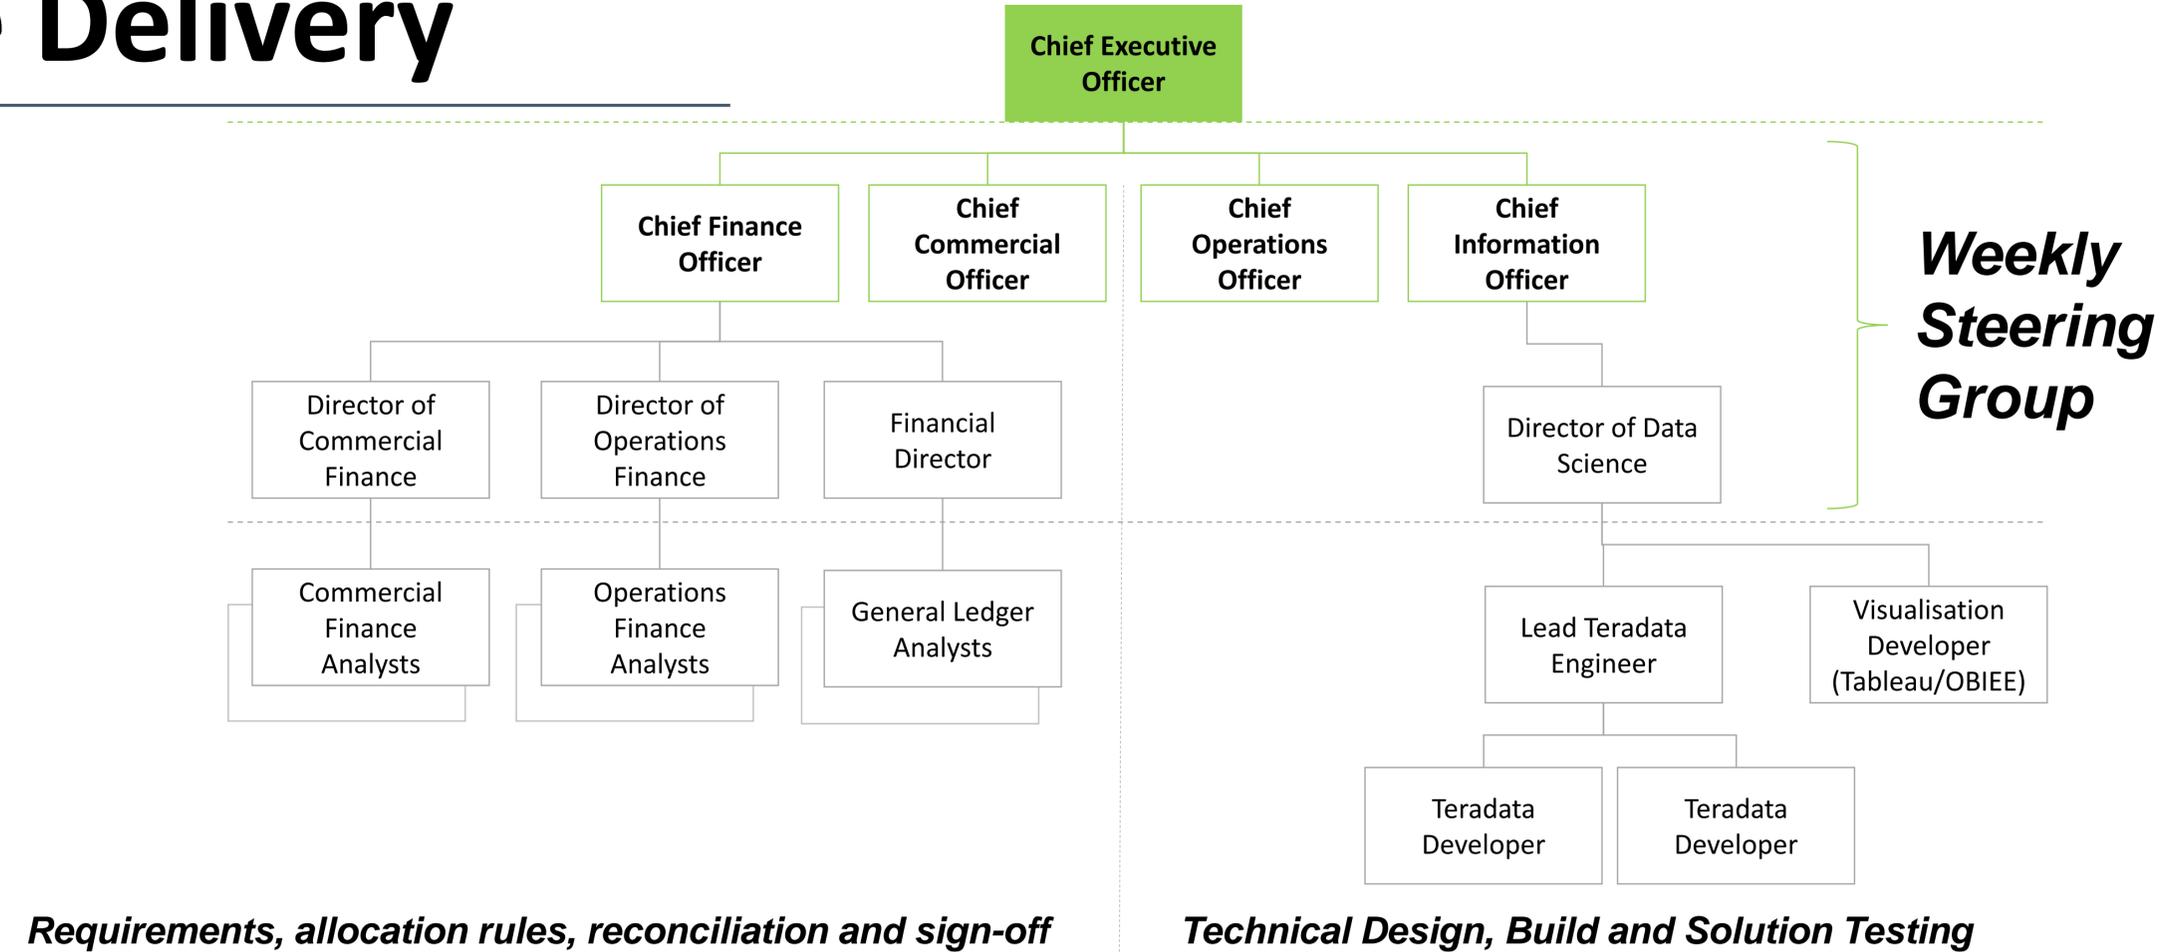

Figures are not genuine – for example only

Approach POC & Scope

- Collaboration with Finance (commercial and operations)
- Used average activity cost (e.g. 15p for all machine sort, 40p for trailer etc.) to allocate at granular level
- Demonstrate art of possible to Exec to show multi-dimensional possibilities
- Background activity for **4 months**
- Sample visualisations
- Framework to demonstrate functionality and possibilities

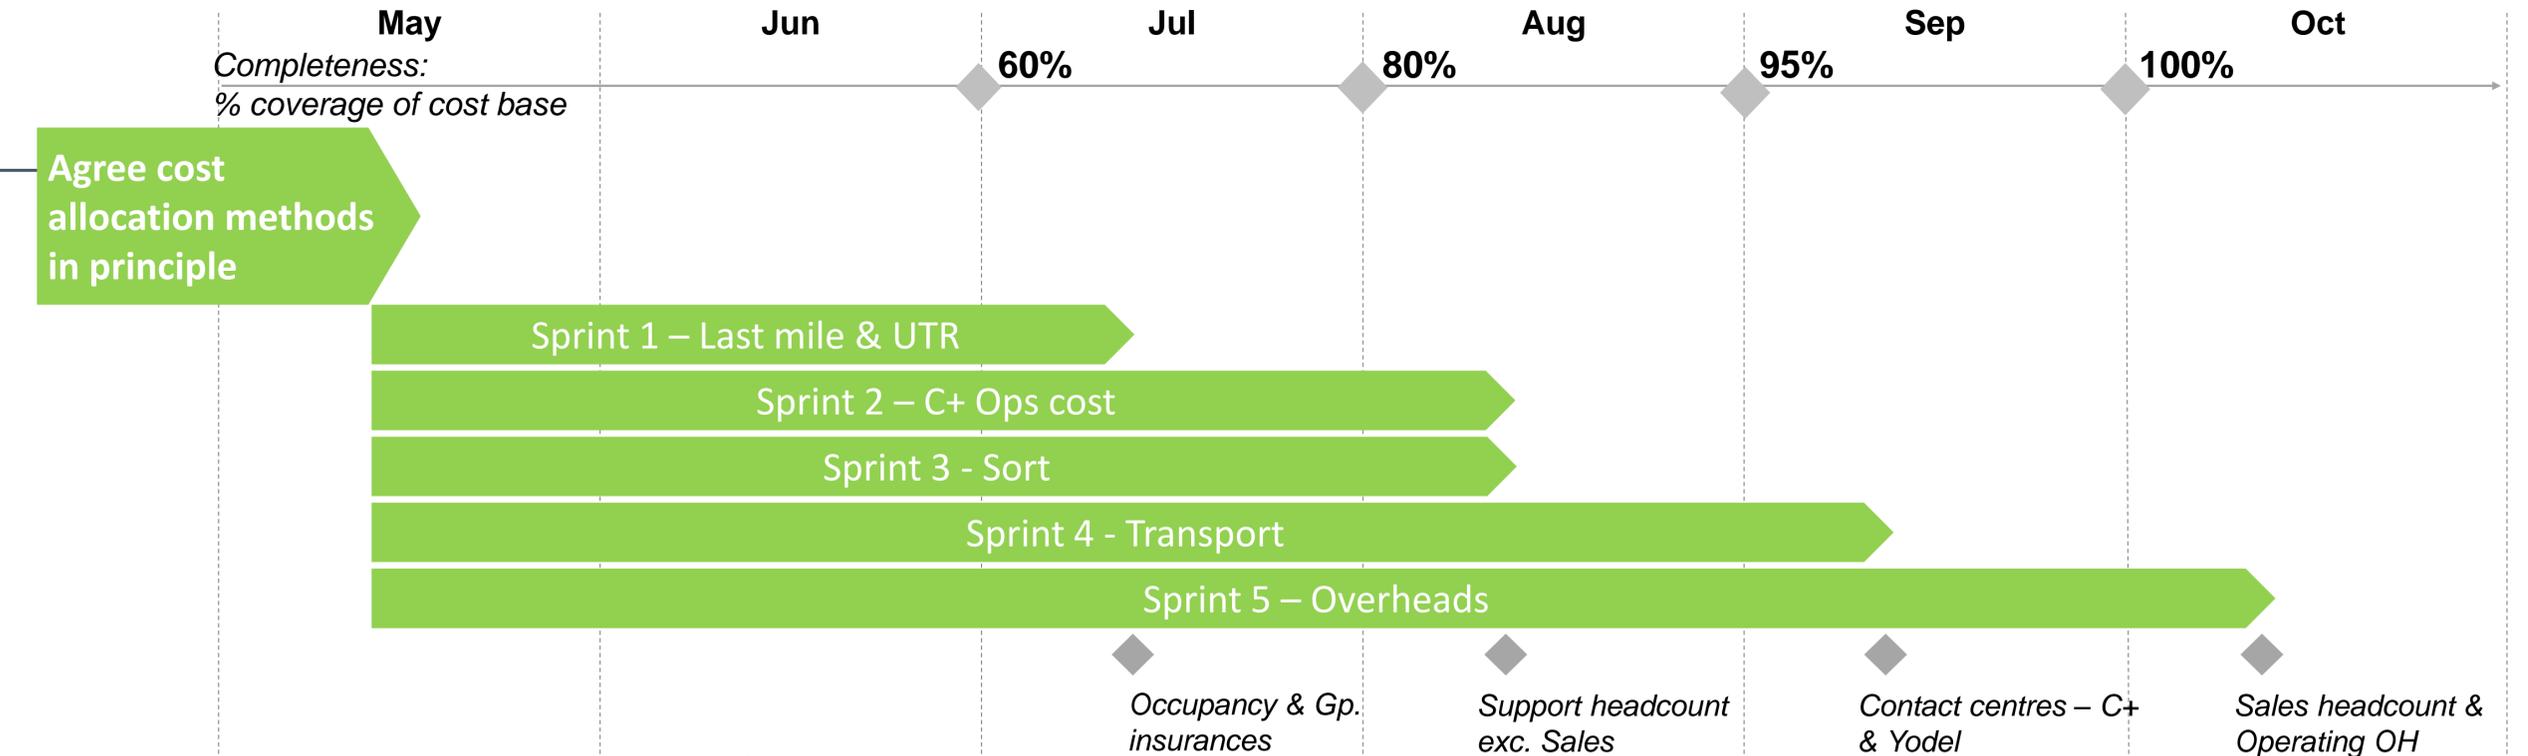

Collaborative Delivery

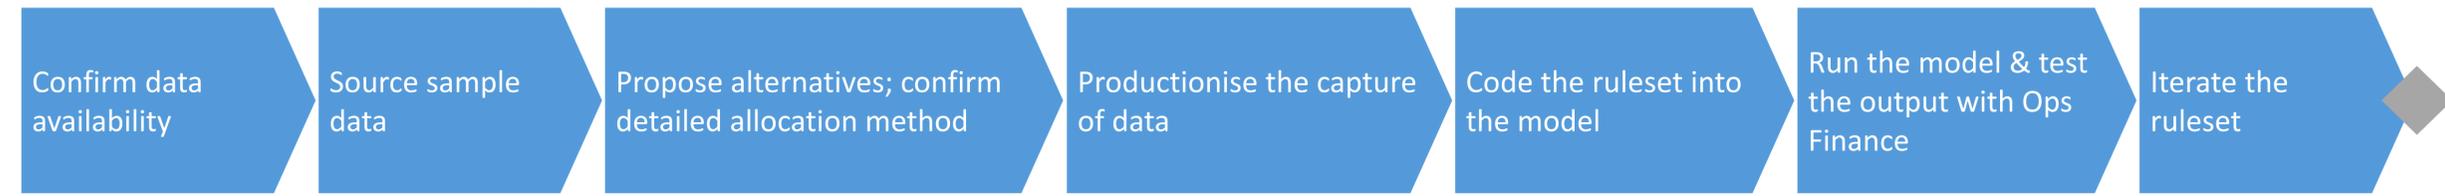

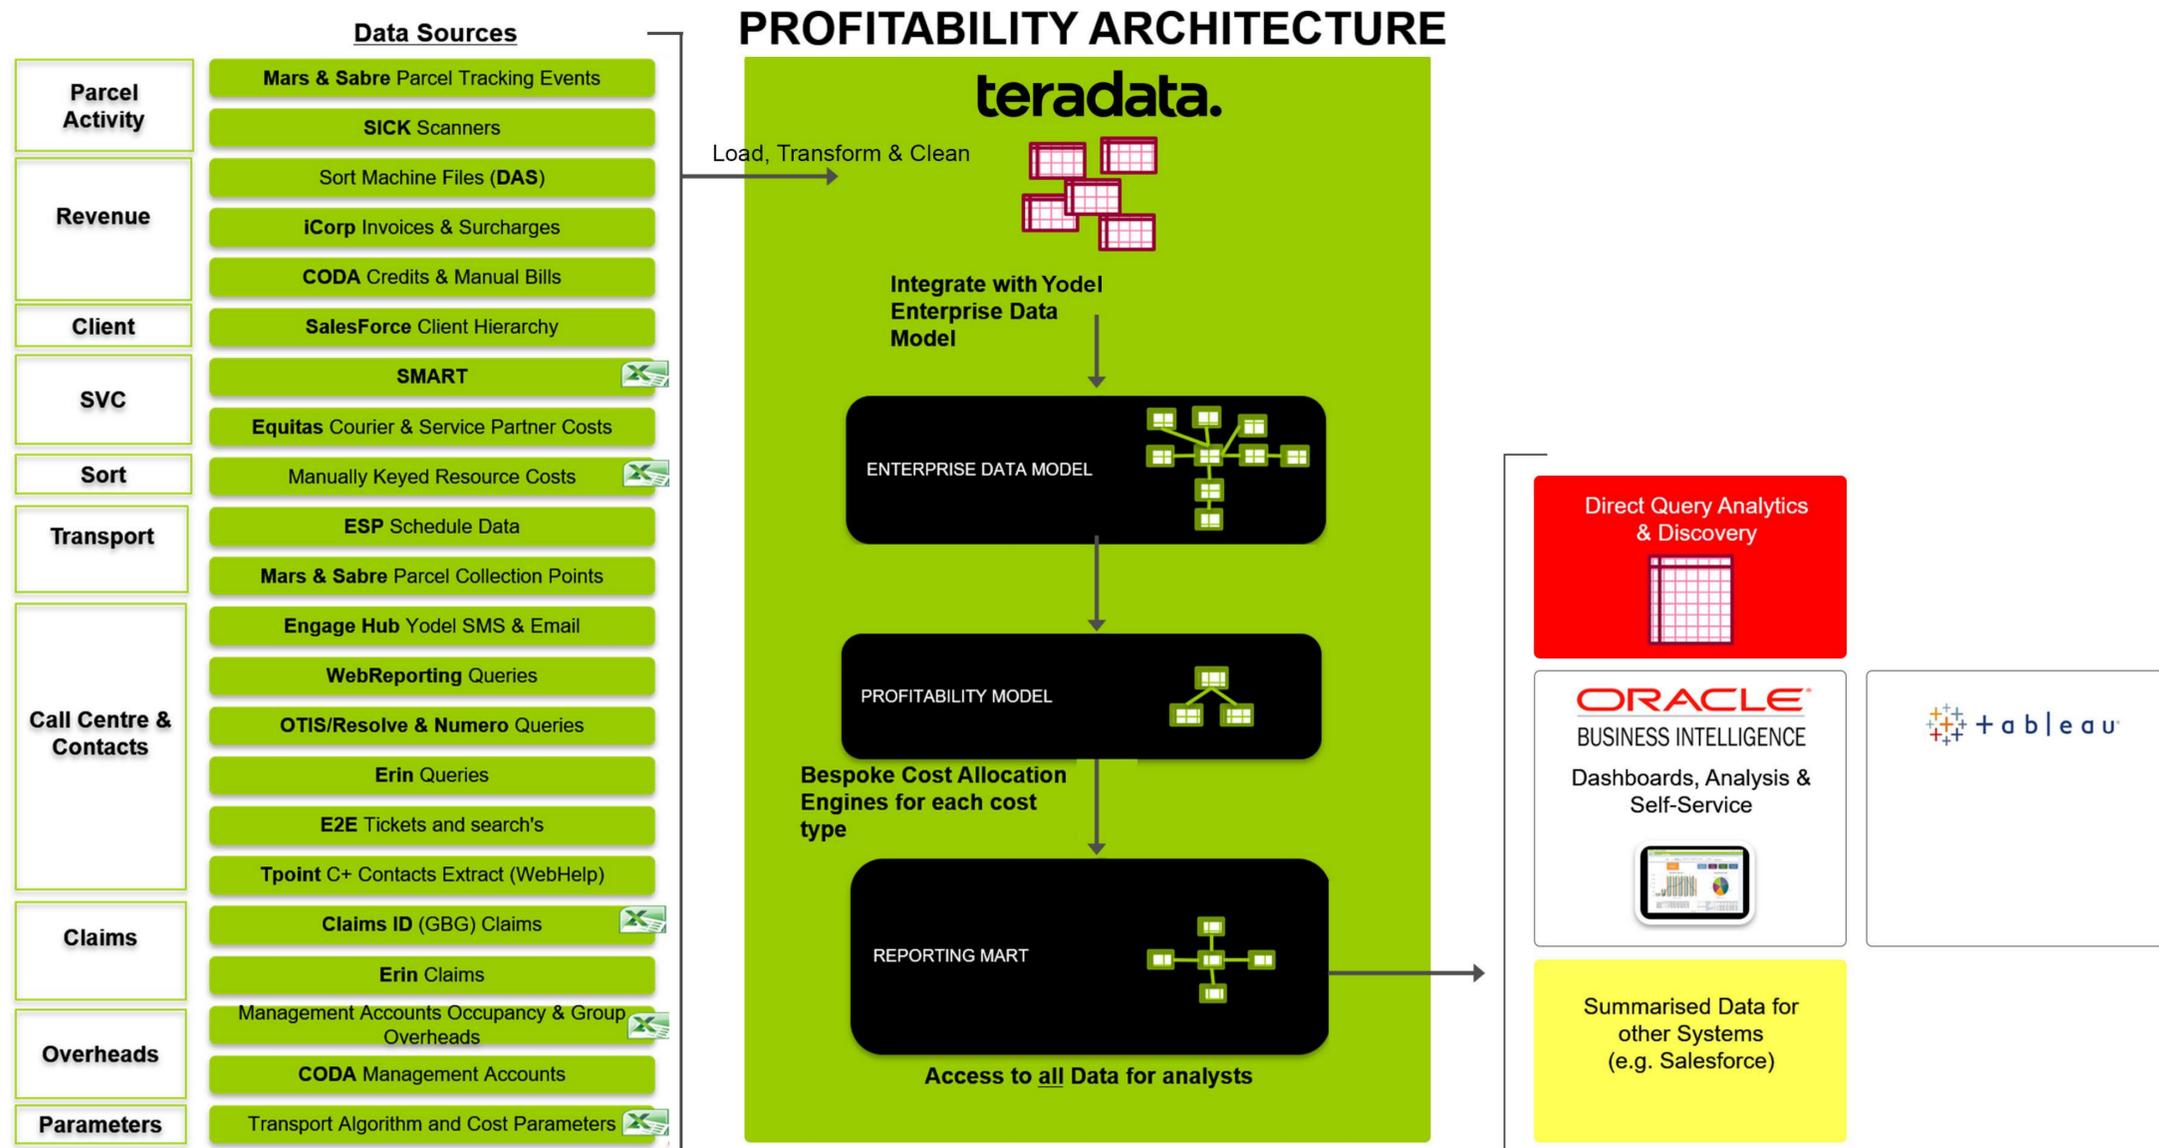

6 month delivery

- Agile Delivery
- Take 1 process at a time
- Find the Data
- Agree the allocation
- Build
- Test
- ALL YODEL COSTS!

Generic Sprint Approach

Costs at Lowest Level

- Costs Allocated at the lowest level
- Typically 22 activity costs per parcel
- 3,500,000,000 activities per year

Activity Detail

Figures are not genuine – for example only

Benefits

- Full Drill through to Detail
- Automated
- Combining data from many sources
- Accessible at the right level to the right people
- Enables Confident Decision Making
- Already supporting key Business Decisions

Compromises & Lessons

- Data gaps (e.g. scan on/off trailer) → allocate parcels to trailer based on collection locations and evidence at sort (not 100%)
- Missing or mis-matching data or set-up issues (Transport Location <> Parcel pickup Location)
- Data For Van Collections absent → no cost allocated
- Detailed trailer costs not available – use algorithm for mileage/time
- Don't wait for 100% accuracy before launching – tool will highlight anomalies (real or in data)
- Collaboration was key – engineer working directly with Finance Analysts
- Risk: documentation is poor – we need to work on that
